JUNCTION 2026 · ASTRAZENECA: EQUAL CARE ACROSS FINLAND · EXA

FirstLine

Shows a wellbeing services county director where the first step of early cancer care breaks in their county, and what to do about it on Monday.

Draft v2 — screenshots from commit 18daaeb, re-check after feature freeze (Sat 18:00)

THE PROBLEM

Where you live decides how fast you see a GP.

85.4%

Vantaa–Kerava

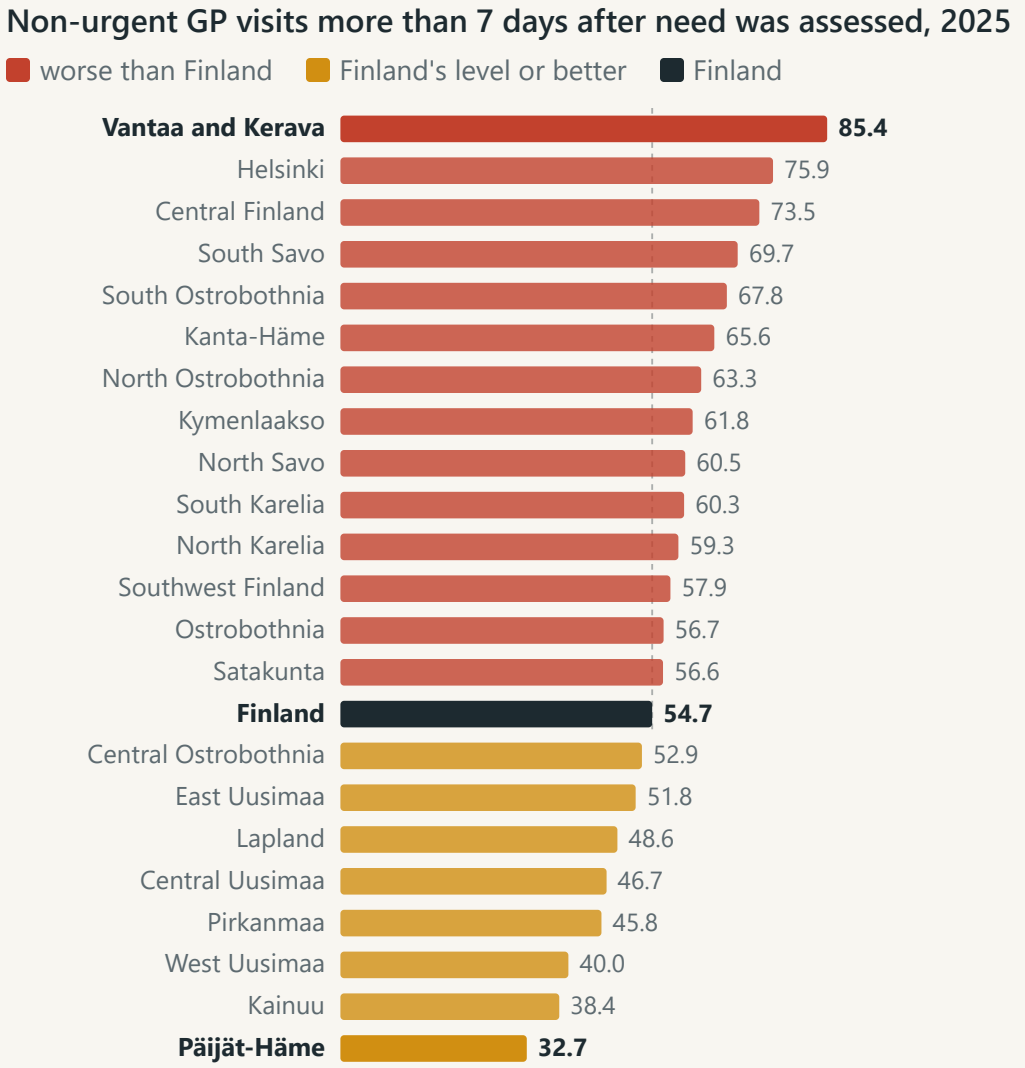

32.7%

Päijät-Häme

In Vantaa–Kerava, 85% of non-urgent GP visits come more than a week after people ask. In Päijät-Häme it's a third.

THL Sotkanet 6411 · 2025

Counts all non-urgent GP visits, not only possible cancer.

WHO IT'S FOR

County directors own the fix. Nobody shows them where their pathway breaks.

Patient
notices a symptom

→

Getting to a GP
wait for a non-urgent visit
Sotkanet 6411 · 2025

→

GP spots possible cancer
no public data

→

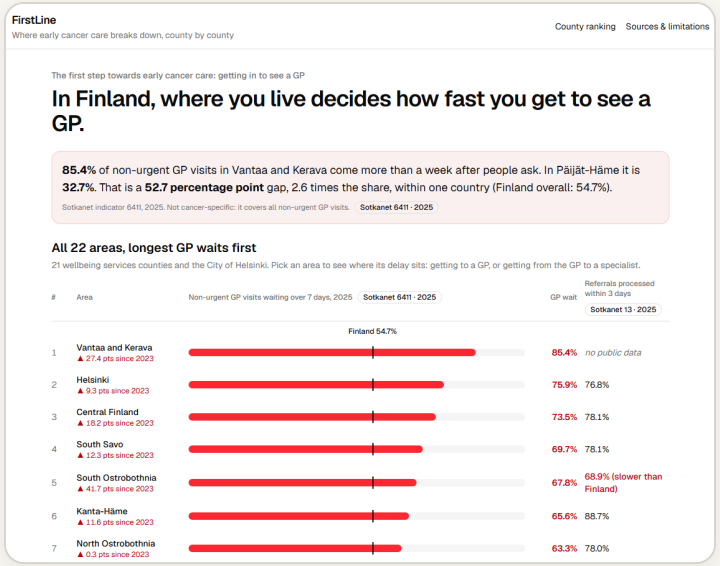

GP → specialist
referrals processed in 3 days
Sotkanet 13 · 2025

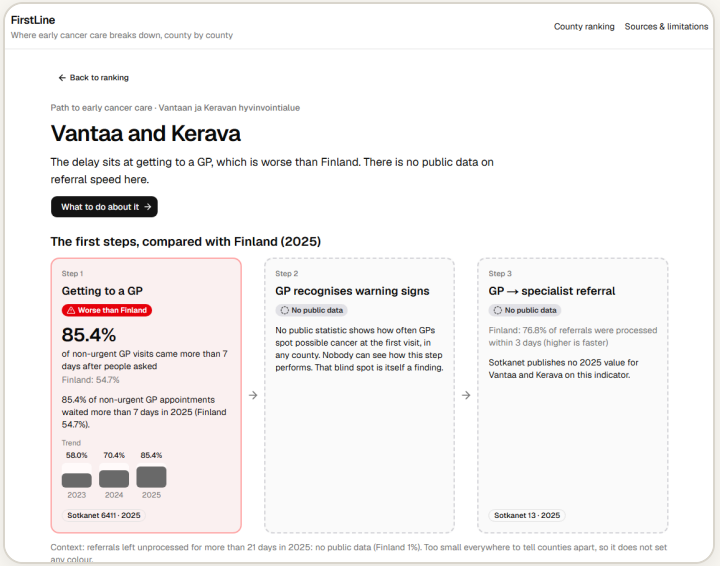

The numbers sit in national tables. Nothing shows a county director which step breaks, or what worked elsewhere.

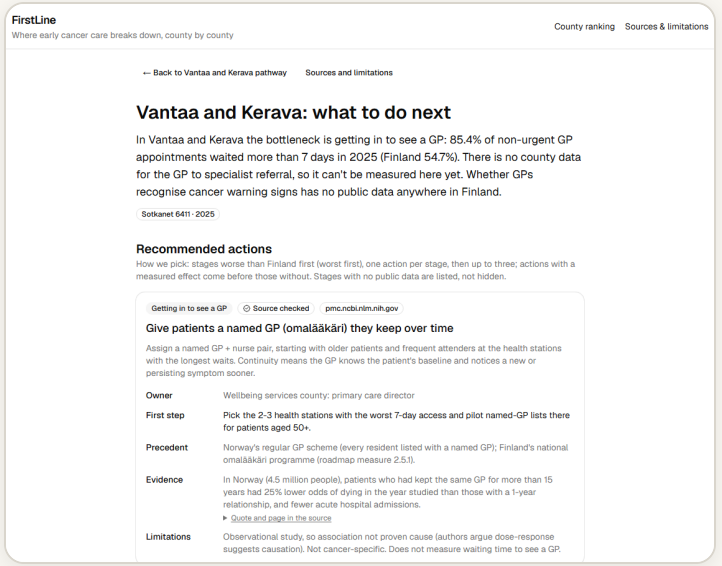

Finland's cancer roadmap asks for stronger GP access (measure 2.5.1). **STM cancer strategy roadmap** · 2026–2031

THE PRODUCT

Three screens: rank, find the break, act.

1 Rank

All 22 areas by GP wait, with referral speed and a source chip on every number.

2 Find the break

red amber no data

Vantaa–Kerava: the delay is getting to a GP.

3 Act

Actions with owner, first step, precedent and source, plus a red-flag helper.

Screenshots of the running app at commit 18daaeb (local dev server, 1440×900 viewport; blank side margins trimmed).

ACT ✓ checked evidence

What worked elsewhere, and what didn't.

Fast-track pathways

−17 days

median time to diagnosis, Denmark

Jensen et al., BMC Cancer · 2015

In the app: **South Ostrobothnia**, red at both steps

A named GP

25% lower

odds of dying, same GP >15 years vs 1 year (Norway, observational)

Sandvik et al., Br J Gen Pract · 2022

In the app: **Vantaa–Kerava**, GP access

Nurse-led visits

Equal or better

outcomes vs doctors, probably (18 trials)

Laurant et al., Cochrane · 2018

Honest result: Sweden's pathways shortened waits, but regional gaps stayed.

Riksrevisionen RiR 2023:12, via Riksdagen · 2023

TRUST

Every number has a source. Every gap is said out loud.

Source on every number

No source, no row.

THL Sotkanet 6411 · 2025

Limitations always visible

6411 isn't cancer-specific. 4 areas, incl. Vantaa–Kerava, lack referral data: grey.

no public data

Sotkanet 13 · 2025

AI can't invent numbers

Validators drop any claim whose number isn't in its source.

API: question box

API: county brief

Public data only. No patient data. Decision support, not diagnosis.

LIVE LAYER · EXA

Checked data shows where care breaks. Exa shows what's happening about it now.

✓ Checked evidence

14 actions, each quoted from its source.

FirstLine evidence table · 2026

Ask anything: linked answers, or “nothing found”.

HOW IT'S BUILT

Public data snapshot first, so the demo works even if a service is down.

Real today

- Ranking, pathway and act screens
- Red-flag helper
- 22 areas, 3 indicators; 14 checked actions
- Exa API: news, evidence, ask + validator
- AI county brief API + fallback

Next: wire into the screens

- Exa panels, question box, AI brief on pages
- Sources & limitations page (PR #10)
- County news beyond 4 demo counties
- Live deploy

THE ASK

Equal first steps, across Finland.

> Pilot with one wellbeing services county: pick the 2–3 health stations with the worst 7-day GP access and start named-GP lists there for patients aged 50+.
